1. ANTECEDENTES

En este anejo se incluye la topografía necesaria para la realización de los trabajos.

Para la realización del proyecto de construcción “PROYECTO DE RENOVACIÓN DE LA CONDUCCIÓN DE LA JARA ENTRE LA PRESA DEL TENEBROSO Y EL DEPÓSITO DE LA CORTA”, se ha utilizado la información topográfica aportada por Canal de Isabel II.

2. ANÁLISIS DE LA INFORMACIÓN RECIBIDA

Previo a la redacción de presente proyecto, con fecha de marzo de 2017, se encargó a la empresa NORTE TOPOGRAFÍA un levantamiento topográfico a escala 1:500 de la traza la traza propuesta para la nueva conducción.

La memoria indicada describe la metodología empleada para la realización de los trabajos topográficos para el proyecto de renovación de la conducción de la Jara entre el Azud del Tenebroso y el Depósito de La Corta.

Los trabajos han consistido en el levantamiento topográfico de detalle de la zona de traza por la que discurre el proyecto y toma de datos del azud existente y de la arqueta de llegada situada en el depósito de La Corta.

La información topográfica aportada consiste en cartografía escala 1:500 georreferenciada en según Universal Transversal Mercator – ETRS 89 Huso 30.

1. INTRODUCCIÓN

La presente memoria describe la metodología empleada en la realización de los trabajos topográficos para el Proyecto de renovación de la conducción de la Jara entre el azud del Tenebroso y el depósito de La Corta.

Los trabajos han consistido en el levantamiento topográfico de detalle la traza por la que discurre el proyecto y toma de datos del azud existente y de la arquera situada en el depósito de La Corta.

2. SISTEMA DE REFERENCIA

En el desarrollo de los trabajos se ha utilizado el Sistema de Referencia Europeo (ETRS89), actualmente el único oficial en España, constituido por:

- Elipsoide GRS80:
- Longitud del Semieje mayor del elipsoide (a) = 6.378.137 metros
Coeficiente de aplanamiento (α) = 1:298,257223563
- Orígenes de coordenadas geodésicas:
 - Latitudes, referidas al Ecuador, positivas al Norte del mismo.
 - Longitudes referidas al Meridiano de Greenwich, consideradas positivas al Este y negativas al Oeste de dicho Meridiano.

Para realizar el enlace al sistema de referencia ETRS89, se ha empleado la red activa del Instituto Geográfico Nacional (IGN), mediante observaciones GPS en tiempo real desde esta red.

La altimetría se ha referido al nivel medio del mar en Alicante, enlazando con la Red de Nivelación de Alta Precisión (R.N.A.P) mediante la aplicación del modelo del geoide EGM08-REDNAP.

3. RED DE BASES TOPOGRÁFICAS

Se ha materializado en lo alto del depósito de La Corta una base de replanteo que se ha utilizado como estación de referencia GPS para el resto de trabajos.

Para su enlace al sistema de referencia, se ha procedido a su observación con GPS en tiempo real desde la red activa del Instituto Geográfico Nacional (IGN), mediante observación GPS en tiempo real desde esta red, quedando materializada en el terreno mediante una marca de pintura.

La toma de datos se ha realizado con equipos TRIMBLE, compuestos por receptores de doble frecuencia que trabajan con observables de código P y unidades de control portátil.

Sobre el terreno se ha creado un fichero de datos para cada base de replanteo observada, con su numeración definitiva, introduciendo los datos propios del punto.

Para la obtención de cotas ortométricas se ha empleado la rejilla del IGN en formato NTV2, con el modelo del geoide EGM08-REDNAP de reciente publicación.

Se adjunta en su apéndice correspondiente las coordenadas (Apéndice 1. Base Topográfica. Coordenadas) y reseña de la Base Topográfica implantada (Apéndice 2. Base Topográfica. Reseña).

4. LEVANTAMIENTOS TOPOGRÁFICOS

Por el método de radiación utilizando receptores GPS en tiempo real en combinación con estación total, se ha procedido a la observación de los puntos para la realización del levantamiento topográfico de la zona de trabajo.

El proceso de datos para el cálculo de las coordenadas del levantamiento se ha realizado con el software LEICA Geo Office, obteniendo a partir de las observaciones GNSS, las coordenadas de todos los puntos en el sistema ETRS89.

Para la obtención de cotas ortométricas se ha empleado la rejilla del IGN en formato NTV2, con el modelo del geoide EGM08-REDNAP.

El listado de coordenadas del levantamiento se detalla en el “Apéndice 3. Levantamiento topográfico. Listado de coordenadas.” y los planos en el “Apéndice 4. Levantamiento topográfico. Planos”.

David Cañada Bermejo
Ingeniero Técnico en Topografía
